Ontario Lyme Disease Map 2017 Estimated Risk Areas

- The estimated risk areas are calculated as a 20 kilometre radius from the centre of a location where blacklegged ticks were found through drag sampling
- While low, there is a probability of encountering blacklegged ticks almost anywhere in the province
- Within estimated risk areas, blacklegged ticks are mainly found in woody and/or brushy areas
- The closer to an estimated risk area, the higher the estimated risk of encountering a blacklegged tick
