The maintenance requirements for the Hydroguard unit are documented at concastpipe.com. The unit should be inspected once per year. Maintenance intervals will be required depending on individual site conditions (traffic use, stabilization, storage piles, etc.). The long-term maintenance frequency can be established based on the maintenance requirements during the first several years of operation if site conditions do not change. The Hydroworks HG unit is typically maintained using a "vactor" truck or "clam shell bucket". There are numerous companies that can maintain this unit. The HG separator must be maintained if there is an appreciable depth of oil in the unit (more than a sheen) or if floatables other than oil cover over 50% of the open water surface on the inlet side of the outlet baffle wall. It should also be maintained once the accumulated TSS/sediment depths are greater than 14" (350 mm) in the inner chamber.
