Subject: Increase in Covid cases

Good day, perhaps you noticed in the news today that Covid cases have increased, they have especially increased in areas where masks were made mandatory over two weeks ago which are also areas that have not yet opened to stage three. **So, almost 75% of the cases come from areas that have made masks mandatory but have not yet opened to stage three.** We cannot say the increase came from opening to early, what does this tell us? Perhaps we should have listened to Terry Whitehead, Judi Partridge, Lloyd Ferguson and Esther Pauls. Perhaps we shouldn't be listening to public health doctors who may know about health but not about PPE's and homemade masks. In the same way that I use a car and know how to drive a car, I don't know how the car works. A Dr and surgeon uses PPE's they don't exactly know how they work or what they do. Find a PPE specialist, one that might not be afraid to lose their job by telling the truth... Public health can be wrong and if you are willing to wait a few more weeks to see if our cases increase as well, just know... that is on you, all of you who failed to do your research.

Toronto area implemented a mandatory mask by-law July 7th. Covid Symptoms appear on average 5-6 days from infection. Testing would likely be done with an onset of symptoms, days 7-10, two days for results and another day or two for reporting... puts us at... well, right about now...

Perhaps you have another explanation? If so, I'd like to hear it.

With all due respect,

~ Tobi
