Re: Applicable Law Review – Zoning By-law Compliance
Zoning District: Mixed Use High Density (C4)
Zoning By-law: Hamilton Zoning By-law No. 05-200
Address: 468 Ottawa Street North

An Applicable Law Review respecting zoning by-law compliance pursuant to application for building permit has been completed and the following comments are provided. There was insufficient information with the application to determine a legally established non-conforming use.

COMMENTS:

1. The proposal is to conduct interior renovations to a existing multiple dwelling with 206 dwelling units with 96 parking spaces and convert a utility area into 21 dwelling units.
2. For the purpose of this review the 206 apartments and associated 96 parking spaces are being viewed as existing, the requirements will only be applying to the proposed 21 dwelling units.
3. The property was zoned G-2 Regional Shopping Centres since 1959 which permitted uses found in the H District , at this time the H District permitted a Multiple dwelling but it has since been deleted.
4. New Zoning amending all of Section 5: Parking was past and approved by Council on April 10th 2024 and is still within the appeal period. The portion of the table below highlighted in orange are the new zoning regulations applicable. Please note you will have to comply with both the new and old parking provisions. You will find the new provisions in orange below.
5. All new fences proposed for this development must comply with the regulations contained within the Fence By-law.
6. All new signs proposed for this development must comply with the regulations contained within the Sign By-law.
7. The designer shall ensure that the fire access route conforms to the Ontario Building Code.
8. The proposed development has been reviewed and compared to the standards of the C4 Zone and Section 5 : Parking, as indicated in the following chart:

Re: **Parking Justification Study**
468 Ottawa Street North – City of Hamilton
Our Project No. NT-15-021

1.0 INTRODUCTION

NexTrans Engineering was retained by PMG Planning Consultants to prepare this Parking Justification Report to support a proposed addition of 21 residential units to an existing rental apartment building located at the captioned address (N-E Ottawa St. North/Barton St. East). **Figure 1-1** illustrates the subject site location. **Appendix A** shows more detailed site aerial.

Figure 1-1: Subject Site Location

The existing 7-Storey building features 206 rental units. The parking includes 90 tenant stalls and 6 visitors for a total of 96 stalls. Vehicular access to the site is provided via a single driveway, one lane in each direction with outbound traffic under a stop-control (see encl. site plan). Public transit service is available seven days a week at the site with two bus stops (north & south) located approximately 50 meters from the main door.

The proposed development would add 21 residential units by utilizing un-used storage space. The total unit count would be 227.

1.1. PARKING BY-LAW REQUIREMENTS

The site is governed by Zoning By-Law No. 05-200 which requires one space per unit or 227 stalls. The existing parking supply is 96 spaces and total deficiency is 131 parking spaces.

In order to assess whether the existing 96-space parking supply can accommodate the existing residential units and the 21 additional residential units, parking utilization surveys were taken to measure the parking utilization/demand rates. The survey methodology and results are discussed below.

1.2. PARKING UTILIZATION SURVEYS

NexTrans Engineering conducted the surveys on Friday and Saturday of March 27 and 28, 2015 from 6:00 p.m. and 10:00 p.m. to capture peak tenant and visitor parking demands at the subject site.

During these surveys a NexTrans staff member walked throughout the parking facilities recording all parked vehicles at 30-minute intervals starting at 6:00 p.m. with the last check beginning at 10:00 p.m. Based on information received from the client, at the time of the survey, 17 of the existing 206 units were vacant. As such, only the occupied units (189 units) were applied to the parking demand ratio calculation. The daily peak hour demand survey results are summarized in **Table 2-1**. The complete parking survey data as well as a graphical summary of the survey is provided and presented in **Appendix A**.

Table 2-1: Peak Parking Demand - 468 Ottawa Street North, Hamilton

Survey Date	Tenant Parking Demand	Percentage Occupancy (Tenant)	Visitor Parking Demand	Percentage Occupancy (Visitor)	Peak Demand	
					Tenant Parking Spaces / Unit	Visitor Parking Spaces / Unit
Friday, March 27, 2015	58	64.4%	5	83.3%	0.31	0.03
Saturday, March 28, 2015	53	58.9%	4	66.7%	0.28	0.02

The observed peak parking demand for tenant and visitor parking at the subject site was at a demand ratio of 0.31 spaces / unit and 0.03 spaces / unit, respectively for a combined ratio of 0.34 spaces / unit. Subsequently, based on the observed peak demand ratio, the proposed increase in unit count to 227 units will result in a parking supply of 70 tenant and 7 visitor parking spaces.

While the proposed parking supply of 90 tenant parking spaces is sufficient to meet the by-law requirements, the visitor parking supply of 6 parking spaces will be deficient by one stall based on the empirical data requirement of 7 parking spaces. It is therefore recommended that 1 tenant surface parking spaces be restriped as a visitor parking space. This will increase the visitor parking supply to 7 spaces to accommodate projected visitor parking demands. Consequently, the foregoing recommendation would reduce the tenant parking supply

to 89 spaces which is more than sufficient to accommodate the projected tenant parking demand of 70 parking spaces. The resulting proposed parking supply is 0.42 spaces per unit (0.39 for tenants and 0.03 for visitors).

It is therefore concluded that the By-law parking requirement of 227 vehicular parking spaces would result in a significant oversupply.

2.0 CONCLUSION / RECOMENDATIONS

Parking utilization surveys indicate a tenant and visitor parking demand of 0.31 spaces / unit and 0.03 spaces / unit, respectively. The peak demand results indicate that the proposed increase in unit count to 227 units will create a demand of 70 tenant and 7 visitor parking spaces.

It is recommended that the existing surface parking spaces be restriped to accommodate 1 additional visitor parking space for a total supply of 7 parking spaces. This would reduce the tenant parking supply to 89 spaces which is more than sufficient to accommodate the projected tenant parking demand of 70 spaces.

In summary, we are of the opinion that based on the parking demand surveys, the recommended parking supply of 96 parking spaces is sufficient to accommodate anticipated parking demands and the proposed addition of 21 units can be supported from a parking perspective.

Yours truly,
